

PP Search google for the best machine learning frameworks in 2025.

I'll search for information about the best machine learning frameworks in 2025 for you.

View result from **query_google_top_results** from **google_search** (local) >

Now I'll gather more detailed information from some of these sources. Let me check the article specifically about 2025 machine learning tools:

View result from **parse_google_html** from **google_search** (local) >

Let me try a different source:

View result from **parse_google_html** from **google_search** (local) >

Let me check the Reddit discussion about TensorFlow vs PyTorch:

View result from **parse_google_html** from **google_search** (local) >

Let me try another source for more comprehensive information:

View result from **parse_google_html** from **google_search** (local) >

Let me check the data science website for more information:

View result from **parse_google_html** from **google_search** (local) >

Based on the information I gathered from multiple sources, I'll provide you with a comprehensive overview of the top machine learning frameworks in 2025.

Top Machine Learning Frameworks in 2025

1. TensorFlow

TensorFlow, developed by Google's Brain Team, continues to be a leading framework in 2025. It's particularly valued for its:

- Scalability and flexibility for large-scale ML projects
- Strong production deployment capabilities
- Support for both CPU and GPU computing
- Comprehensive ecosystem including TensorFlow Lite for mobile and edge devices
- TensorFlow Extended (TFX) for managing ML pipelines

TensorFlow is widely used across industries, from Google's own services to companies like Uber for ride pricing algorithms.
